

HOW DO THEY DO THAT???

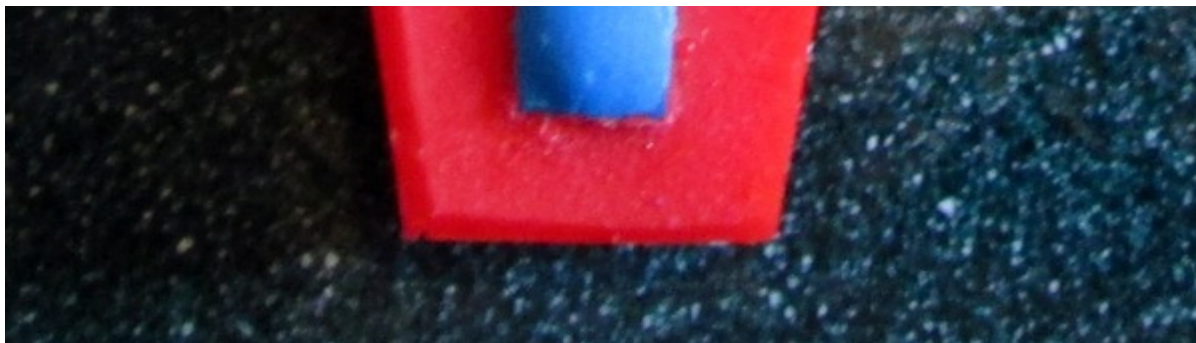

Ok, here we go! Hold on tight because you will be blown away by this fabulous shoe tutorial by Iris Rezoagli of Cakes Dreams By Iris. A special thank you to Iris for fitting this into her schedule in the midst of hurricane Sandy. Our hearts go out to all our friends on the east coast...

1. Supplies: gumpaste, [fondant](#), color gel blue royal, rolling pin, feathers silicone molds(sugar Delites) [Feather large by Iris](#), [Feather small by iris](#), [high heel shoe kit #2](#) (Sugar Delites), [wire #20](#), sugar glue, [gourmet writer pens](#) (Sugar Delites)

2. Start by spraying cooking spray to the heel silicone mold and wipe it with paper towel. Mix 50/50 (gumpaste/fondant) (this mix is modeling paste) and then apply the color royal blue. Make a cone with the modeling paste and push on the silicone mold, cut a wire #20 of a 4 inch long and insert the wire in the heel for stability and let dry for one day.

3. Day after the heel has been made stretch modeling paste very thin then apply water with a brush to the heel and cover. Cut the excess. Let dry the heel for 4 days.

4. Stretching the modeling paste with a rolling pin, leave the sole part thick so you will get the platform of the shoe and cut with the shoe cutter. Then stretch more modeling paste and this time all evenly thin and the cut with the shoe cutter this is the insole.

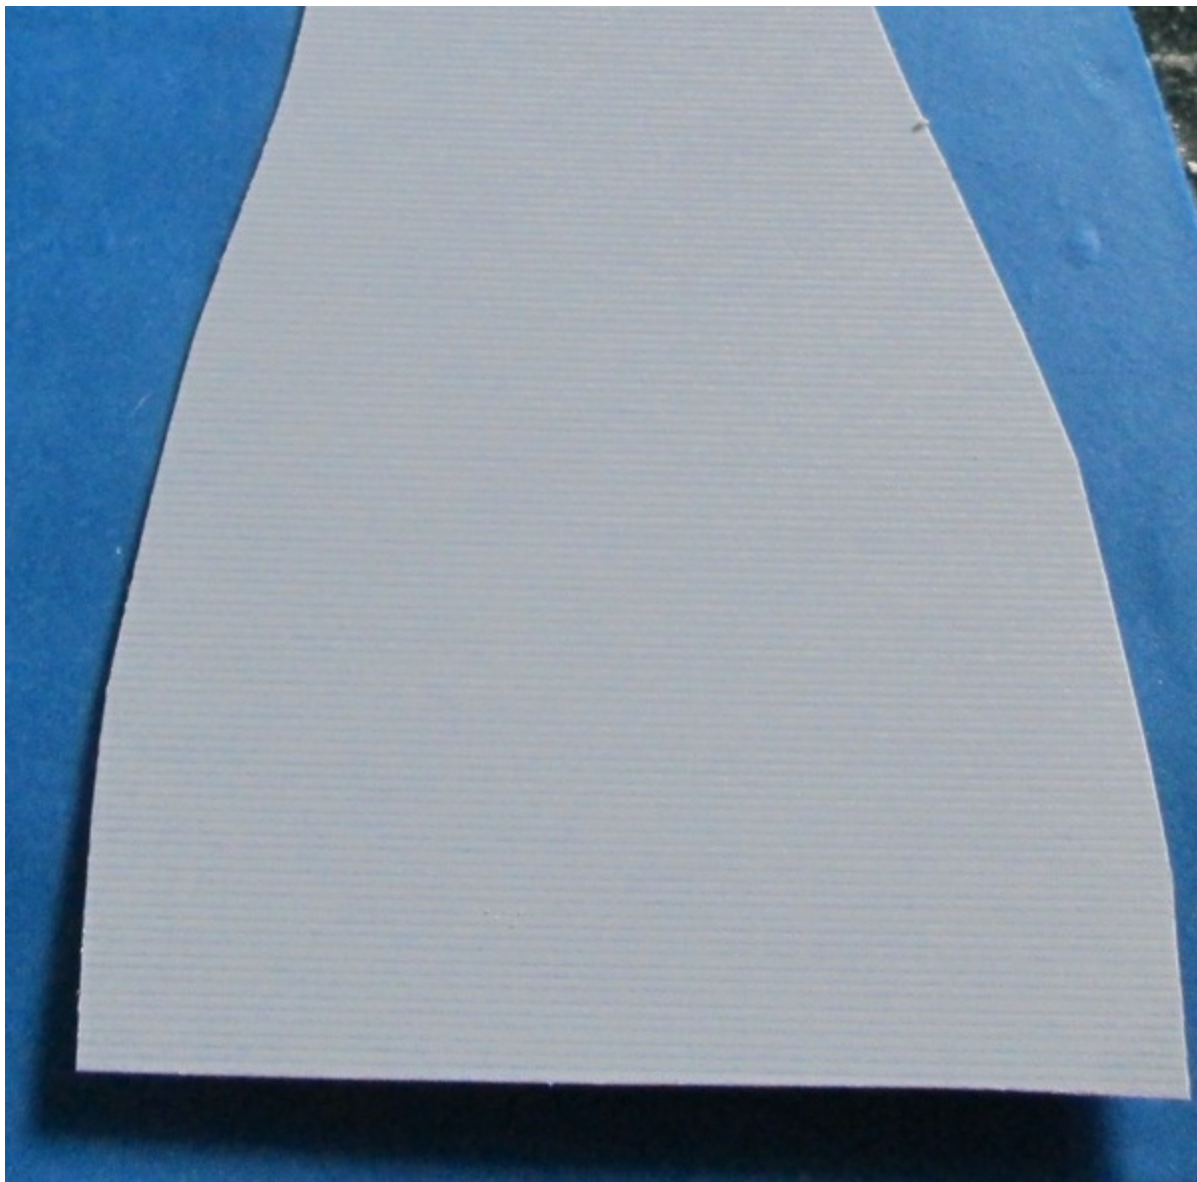

5. Glue the platform and the insole, and place in the styrofoam form, and glue the heel to the sole.

6. Stretch modeling paste and cut with the template and use the stitching tool

7.

8. Stretch modeling paste not too thin, and cut it with the template

9. Glue to the back to the shoe, and let dry for 3 days.
